LXD LEARNING BY DESIGN AI

ENTERPRISE COHORT · SEVEN WEEKS

# From using AI to building with it, in seven weeks.

Non-technical leaders who had never set up a connector, now running their own agents with scoped permissions.

| WHO | BEFORE | AFTER |
|---|---|---|
| **JPMorgan Chase**<br>Research and strategy team lead | Paid an outside vendor to tag every research piece. No in-house taxonomy, so the team kept hitting walls. | Building the firm's own paragraph-level taxonomy, approving every judgment call. |
| **JPMorgan Chase**<br>Technology program management lead | Stand-up notes and a 13-program portfolio status pulled together by hand. | Two agents built inside JPMorgan: a stand-up summarizer and the portfolio report leadership asked for. |
| **Target**<br>Regional corporate security leader | Quarterly building-access audits reformatted by hand. Peer benchmarks took months of off-the-record calls. | An audit workflow that compares quarters automatically, and a sourced benchmark deck taken to leadership. |
| **PNC**<br>Private banking market leader | "I didn't know how to do any of this." Had never set up a connector. | Runs a weekly agent across four calendars with scoped permissions, and is sending PNC colleagues to the next cohort. |

**7% → 75%** AI fluency **49% → 86%** confident AI use **90%+** completion
