LXD
LEARNING BY DESIGN AI

Building AI capability and proving ROI

We build a shared AI brain in your team, then ship the workflows/agents, so you begin building **compounding** systems (every new use case is faster to build and cheaper to run than the last.)

01 · BUILD THE BRAIN
One layer for your data, metric definitions and know-how. Every workflow reads from the same source of truth.

02 · SHIP WORKFLOWS
Internal operations first, then customer-facing where it earns it. Live in weeks, not quarters.

03 · CUT TOKEN SPEND
Shared skills, caching and smaller models for routine steps, open router, and budget limits, so cost falls as usage grows.

Recent work, by team

NON-TECHNICAL TEAMS ROI in marketing and sales

TECHNICAL TEAMS ROI in product and engineering

Marketing — roo

Paid ads manager agent

Vet talent marketplace (~$40M ARR). Built for the VP of Marketing and live in two weeks.

500+ ads pushed to Facebook and Instagram automatically, to the team's parameters.

Product and engineering — TrustVet

Prototyping engine on the real codebase

Vet tech platform. Their design system, read-only data, a clean branch per session.

The **founder ships changes himself**; engineers review a branch, not a screenshot or Lovable prototype, increasing **speed to ship** on a legacy codebase.

Sales — chestnut, Willow Education

Outbound engine

Signal-based lists, research and personalized sequences, built then run with the team.

Willow: on track to 5x revenue this school year.
Chestnut (a16z-backed): new AE booking ICP meetings by the end of week one.

Forward deployment — cloudforce

Stood up a labs and prototyping division

Microsoft partner and an Owl portfolio company whose product deploys AI inside each customer's own Azure cloud, so speed is hard by design.

Set the **approach and initial infrastructure** so the team could prototype and ship faster. **Prototyped** concepts for faculty, integrating with **Canvas**.

HOW WE WORK

Embedded, done with you. Our own AI-native engineers and product leads work inside your team.

Any starting point. From AI-native teams needing capacity to teams just getting set up.

We measure and drive ROI. We track what your AI usage returns, for technical and non-technical teams alike.
